INFIHEALTH

A dedicated mobile application service that lets you connect with your patients.

What is InfiHealth?

Every healthcare provider is moving quickly in parallel with technology. Along with their medical technology, they are also adopting customer engaging technologies. On the same line, Infitech has created a simple to customize and use application for the doctors and the patients. The patient side application can help them book appointments, get information, check up on statuses, get medical records and more. The doctor side application helps the hospital staff to maintain medical records, get patient information, update other departments, track patient notes and more.
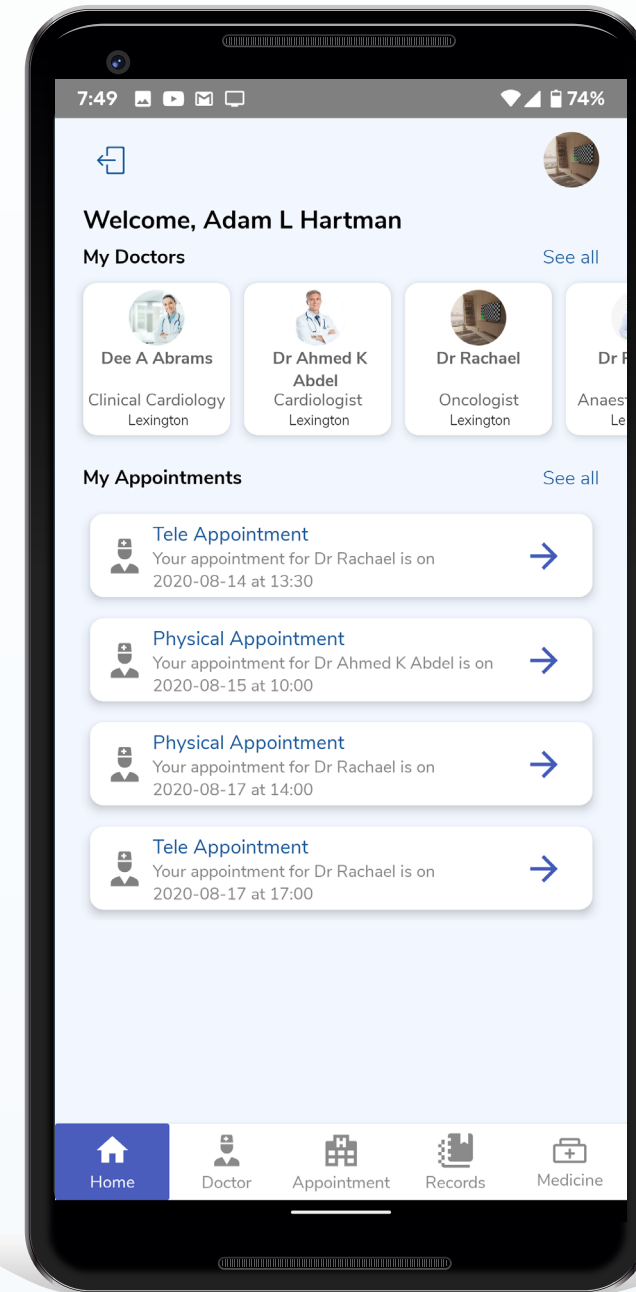

How it works?

Doctor

01 When a doctor signs up with InfiHealth, he/she is given a log in access to the InfiHealth mobile app and web portal.

02 The doctor can input his/her details, location, work timings, and other details

03 After opening the business on the app, the doctor will get a referral code and QR code

04 The referral code/QR code can be shared with his/her patients

05 The doctor can use the application to accept, decline or reschedule appointment with patients

06 Patient Medical Records can be accessed through the application, after the patient has added the doctor to their mobile app

07 Update patient diagnostics, treatment and other information from the app using text, image scan or pdf upload facility

08 Integration with Google Calendar for appointment booking

Patient

01 The patients can download the InfiHealth application for free from Google Play Store and Apple App store

02 The patient will then register themselves online

03 The patient can add the referral code or scan the QR code from the doctor's office, marketing material, email, etc.

04 Once scanned or added, the doctor would be listed in the patient's application

05 The patient can then book an appointment, check doctor information, location, and get contact information

06 The patient can view his/her medical history through the mobile app

07 The patient can add multiple doctors, clinics or hospitals based on his/her preference using the referral code/QR code

Features

- Dedicated application between doctor and patients
- Doctor Details (for doctors linked to the patient account only)
- Search by categories and location
- Patient Medical history
- Video Consultation (availability of feature is subject to local laws)
- Booking appointment for self and family member

About Infitech

We are a team of highly successful, internationally experienced individuals, brought together by a common passion for creating long-lasting, sustainable value for our clients. Backed by promoters from the United Kingdom, our team structure and mix enable us to combine the freshness, nimbleness and dash of a start-up with the considered, deliberate and logical approach to problem-solving of mature companies. We achieve this through meticulously scoped, methodically analyzed and immaculately delivered solutions - solutions that are good on paper as well as in practice.

Our footprint predominantly encompasses Healthcare, Hospitality, Education, Construction and Retail, although we love a challenge in any field! Our satisfied clientele would have no hesitation in recommending our solutions in 2D/3D Animation and graphics, corporate videos, Mobile apps, Cloud-based portals, IOT and Immersive technology solutions and Business Process Optimization.

We are so confident about our ability to forge a long-term relationship with our clients, we invest a significant amount of our own resources in delivering an initial proof-of-concept for them.
